Press Release

2 June 2017

## AAQIUS denounces the United States' exit from the Paris Climate Agreement!

AAQIUS deems that, with his decision to withdraw from the Paris Climate Agreements, US President Donald Trump has made a grave political, economic and social error, as much with regard to his population as to that of the planet. AAQIUS shares the view of French President Emmanuel Macron, specifically, that “there is no Plan B, because there is no Planet B”, and feels, like him, that “The Paris Agreements are not renegotiable”.

An engaged contributor to COP21 in Paris, COP22 in Marrakesh and present at the One Belt-One Road Summit last 14-15 May in Beijing, AAQIUS calls upon the three aforementioned nations, all signatories to the Paris Agreement, to take up the helm in the fight against climate change and remobilise the Paris Agreement's 194 signatory countries, within the framework of the United Nations.

Just as every indicator regarding climate warming has moved into the red zone, and as we stray from our target of remaining under the 2°C mark, AAQIUS asserts that it will maintain its aggressive strategy on renewable energies, especially on the innovative technologies that will soon enable the hydrogen sector begin operating.

As an innovative company, AAQIUS wishes to voice its solidarity with the researchers, scientists, engineers, companies, environmental associations, cities and States in America wishing, like California, to abide by the Paris Agreement.

AAQIUS invites them to continue engaging in ever-more exchange and carry on the responsible and constructive dialogue on the planet's future.
